### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The specification is to be amended as shown below. This amendment is placed after the title of the invention.

### **CROSS-REFERENCE TO RELATED APPLICATION**

This application is a divisional of Appl. Ser. No. 10/117,903, filed April 8, 2002, now U.S. Patent No. 6,693,157.

***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: Claims 9-17 are drawn to a method for preparing an organometallic complex comprising converting a pentacyclic diketone to a triquinane diene, doubly deprotonating the triquinane diene to produce a triquinane dianion, and reacting the dianion with a transition metal source to give an organometallic complex that incorporates a chelating, dianionic triquinane ligand.

Mehta *et al.* (*J. Am. Chem. Soc.*, 1986) and Dailey *et al.* (*J. Org. Chem.*, 1987) are principal references that outline synthetic routes to the diquinane diene ligand precursor. None of the references discusses or is concerned with preparation of organometallic complexes therefrom, or organometallic complexes in general.

U.S. Patent No. 6,544,918 to Nagy *et al.* appears to be the closest reference. The patent relates to olefin polymerization catalysts containing chelating, dianionic ligands. These ligands are formed from bridged hydrocarbons or bicyclic hydrocarbons containing exocyclic allyl anion moieties. In contrast, triquinane dianion, is tricyclic with endocyclic allyl anion moieties. Therefore, the reference does not teach the subject matter of the present invention, and it would not have been obvious to one having ordinary skill in the art to arrive at the subject matter of the present invention in view of the teachings presented in Nagy *et al.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record but not relied upon is considered pertinent to the Applicant's disclosure. The following references, cited in the accompanying PTO-892, describe organometallic complexes containing similar pentacyclic ligands.
